MISSION

“Reliability, Quality, Innovation and Passion for the Challenges are the Values that guided, and will guide, the Team toward the maximization of the Competitive Advantage of our Customers”

“Affidabilità, Qualità, Innovazione e Passione per le Sfide sono i Valori che hanno guidato, e guideranno, il Team verso la massimizzazione del Vantaggio Competitivo dei nostri Clienti.”

Be.Tube Srl has proprietary rights of
“Be.Ca. Engineering” trademark.

COMPANY HISTORY

Be.Tube was set up on **2010** by **engineers and technicians specialized** in bimetallic and finned tubes addressed to heat exchangers.

On **2010** technical team of Be.Tube, after several years of applied research, registered an **invention design patent** about technology for manufacturing **bimetallic tubes**. The innovative method has already been applied in several applications and the final customers are highly satisfied in terms of quality and finished product price.

During **two-year period (2010/2011)** the company increased the product range installing new manufacturing lines for further products: **low-finned tubes and U-bent tubes**.

During **two-year period (2012/2013)** Be.Tube started turbulator production developing and patenting a new machine for producing **turbulators made by strips and wire** addressed to increase performances of air-cooler and tube bundles (increment of turbulence inside the heat exchanger tubes).

On **2014** Be.Tube registered “**Be.Ca. Engineering**” **trademark**, after years of marketing analyses.

During last years (2014/2016) Be.Tube increased production range introducing four new production lines: three production lines for **extruded-finned tubes** and one production line for **embedded-finned tubes**.

Currently Be.Tube is supporting customers designing new products addressed to special applications such as **condenser and evaporator tubes with inner grooves**.

APPLICATIONS

RESEARCH & DEVELOPMENT

Plain Tube

Tube with Turbulator

Be.Tube developed and patented an innovative method for manufacturing bimetallic tubes assuring an excellent quality level with a competitive price.

Be.Tube ha sviluppato e brevettato un metodo innovativo per la produzione di tubi bimetallici garantendo un ottimo livello di qualità ad un prezzo competitivo.

Bimetallic tubes offer an excellent technical and economical solution for the production of high-performance heat exchangers with **high stress** and **corrosive** conditions.

I tubi bimetallici offrono un'ottima soluzione tecnica ed economica per la fabbricazione di scambiatori di calore ad elevate prestazioni soggetti a **sollecitazioni** e **corrosione** estreme.

For different materials combination please contact our sales department. Per combinazioni di materiali differenti preghiamo di contattare il nostro ufficio commerciale.		

Bimetallic tube is composed of two different materials: usually inner material is a corrosion resistant alloy (copper, aluminium-brass, titanium) whereas the outer material is a high-stress resistant alloy (stainless steel, carbon steel, titanium).

However, it is possible to manufacture bimetallic tubes with any material combination.

Il tubo bimetallico è composto da due differenti materiali: solitamente il materiale interno è una lega resistente alla corrosione (rame, alluminio-brass, titanio) mentre il materiale esterno è una lega resistente alle sollecitazioni (acciaio inossidabile, acciaio al carbonio, titanio).

È comunque possibile produrre tubi bimetallici con qualunque combinazione di materiali.

Wooden Case Packing / Imballo in Casse di Legno

with Ferrules / con Ferrule

In applications with high pressures and corrosive conditions, bimetallic tube permits a large **economical savings** in comparison with a tube made of a single alloy, since the use of precious materials is reduced to the minimum.

Nelle applicazioni ad elevate pressioni in ambienti corrosivi, il tubo bimetallico consente un forte **risparmio economico** rispetto ad un tubo realizzato in un'unica lega, in quanto l'utilizzo di materiali pregiati è ridotto al minimo.

Inspections and Tests / Ispezioni e Prove

Chemical Composition / Composizione Chimica	Pulling Test / Prove di Sfilamento
Mechanical Properties / Proprietà Meccaniche	Boroscopic Inspection / Ispezione Boroscopica
Hydrostatic & Pneumatic Test / Prova Idrostatica & Pneumatica	Eddy Current Test / Correnti Indotte

Applications

The common application fields are:

- Heat exchangers for power plants (electric, nuclear, thermal and geothermal power plants)
- High corrosive systems (condensers, evaporators, sea water desalinations, fertilizing, urea systems, ammonia, gas, corrosive acids)
- Chemical and petrochemical industries
- Food processing and refrigeration industries

Applicazioni

I campi di applicazione più comuni sono:

- Scambiatori di calore per centrali (elettriche, nucleari, geotermiche, termoelettriche)
- Impianti ad alta corrosione (condensatori, evaporatori, dissalatori, fertilizzanti, impianti urea, ammoniaca, gas, acidi corrosivi)
- Industria chimica e petrolchimica
- Impianti alimentari e tecnica del freddo

**Stellar Bimetallic Tube
Tubo Bimetallico Stellare**

LOW FINNED TUBES / TUBI ALETTATI LOW FIN

Production

Low Finned tube is a finned tube obtained through **plastic cold deformation**.

The method consists in realizing, from a smooth tube, fins with a particular geometric form without removing material; this plastic deformation causes an increment of heat exchange efficiency, and allows to reduce the heat exchanger size.

Technical Specifications

It is possible to produce low finned tubes with different materials and dimensions, on customer request.

Produzione

Il **tubo alettato Low Fin** è ottenuto attraverso una **deformazione plastica a freddo**.

Il metodo consiste nella realizzazione di alette, partendo da un tubo liscio, con una particolare forma geometrica senza asportazione di materiale; questa deformazione plastica causa un incremento dell'efficienza di scambio termico e consente di ridurre le dimensioni degli scambiatori di calore.

Specifiche Tecniche

Su richiesta del cliente si può valutare l'utilizzo di differenti materiali e dimensioni per la produzione di tubi alettati.

U-BENT TUBES / TUBI CURVATI AD U

Be.Tube offers U-bent tubes destined to boilers and heat exchangers.

All processes are carried out according to technical standards: **TEMA "R"** for heat exchanger tubes and **UNI EN 12952-5** for boiler plants.

Technical Specifications

U-bent tubes are manufactured according to the technical specifications requested by customers:

Standard Dimensions Dimensioni Standard			
Outside diameter Diametro esterno		$6 \div 63,5 \text{ mm}$	$\frac{1}{4}'' \div 2 \frac{1}{2}''$
Maximum overall length Lunghezza complessiva massima		$1 \div 28 \text{ m}$	$3 \div 92 \text{ ft}$
Bending radius Raggio curvatura	Min	$1,5 \times \text{tube diameter}$ $1,5 \times \text{diametro tubo}$	
	Max	1500 mm	4 ft

Be.Tube propone la produzione di tubi curvati ad "U" impiegati all'interno di scambiatori di calore o di boiler.

Tutte le lavorazioni sono conformi alle norme **TEMA "R"** per tubi destinati a scambiatori di calore ed alle norme **UNI EN 12952-5** per impianti caldaistici.

Specifiche Tecniche

I tubi curvati ad "U" sono prodotti rispettando le specifiche tecniche del cliente:

Materials / Materiali	
Carbon Steel	SA 179 / A 179
	SA 210 / A 210
	SA 334 / A 334
Stainless Steel	SA 213 / A 213

Heat Treatment / Trattamento Termico

Packing / Imballaggio

Technical Features

We provide our bent tubes including:

- **Heat treatment** (by Joule effect on bent area): **Inert atmosphere** inside tube.
- **Anti-oxidation** surface treatment (with protective oils).
- **Trimming and deburring** of the ends.
- **Internal cleaning** and **cap** insertion.
- Packing in custom racks.

Caratteristiche Tecniche

Forniamo i nostri tubi curvati includendo:

- **Trattamento termico** (effetto Joule in zona curvata): **Atmosfera inerte** interna al tubo.
- Trattamento superficiale **antiossidante** (con olio protettivo).
- **Rifilo** a misura e **sbavatura** estremità.
- **Pulizia interna** ed applicazione **tappi**.
- Imballo su misura del cliente.

EMBEDDED FINNED TUBES / TUBI AD ALETTA RIPORTATA

G-Fin

G-Fin

L-Fin

KL-Fin

LL-Fin

KL-Fin

Production

Be.Tube offers different finned tubes: **tension wound finned tubes** and **embedded finned tubes**. Tension wound finned tubes are formed by winding a strip made of aluminium or copper around the tube under tension. The strip winding technology provides different types of fins: **L-Fin, LL-Fin, KL-Fin**.

Embedded fins (G-Fin) are made by winding aluminium or copper strip into a helical groove machined on the outer surface of the tube.

Produzione

Be.Tube propone differenti tubi alettati: **tubi ad aletta riportata e incastrata**.

I tubi ad aletta riportata sono realizzati mediante l'avvolgimento in tensione di un nastro di alluminio o rame attorno al tubo. La modalità di avvolgimento dell'aletta determina diverse tipologie di alettatura:

L-Fin, LL-Fin, KL-Fin.

I **tubi ad aletta incastrata (G-Fin)** sono realizzati mediante ricalatura del nastro di alluminio o rame in una sede elicoidale creata nel tubo.
